

COMPANY PROFILE

BACKGROUND

Hybrid Control Corporation is a black owned electrical control systems and power energy management services company established in 2008. The company was established as part Rockwell Automation Social Economic Development program of which Enterprise Development is part thereof. Rockwell Automation is a New York Stock Exchange listed company that is a world leader in the Automation business.

The objective for **Hybrid Control Corporation** is to be preferred System Integrator and be the technical and commercial expert regarding offering control systems and process solutions to customers.

Hybrid Control Corporation intends to provide accurate and reliable engineering service to our customers. We endeavor to involve the client in providing us with specific requirements or business issues they faced in their manufacturing process. In this way we able to provide more than a product but a solution that will help improve productivity and overall equipment effectiveness thus ensuring plants availability and assets optimization.

OUR MISSION

Our main objective is to contribute to sustainable economic upliftment, provide key services dedicated to servicing our client's needs, operating through specialized technologies and strategies for efficient management as well as striving for quality and professional services.

OUR VISION

To be the provider of choice in the Electrical, Process Control Systems, Information and Reporting systems field by providing best and accurate engineering services.

We will achieve this by providing experienced engineering personnel and motivated workforce who will be managed by team of professionals who will ensure that customer requirements and expectations are met or exceeded upon.

This passion and our dedication to learning and skills development has ensured that our success has benefited not only ourselves, but the thousands of people who are touched by, and make use of our technology continuous basis.

HOW IT ALL FITS TOGETHER

In order to understand exactly what Hybrid Control Corporation can do for you, it is important to understand that the six unique focus areas act cohesively to provide customers with a diverse and all-encompassing value experience.

Our history is rooted in **TELEMETRY, SCADA, ELECTRICAL, INSTRUMENTATION AND PROCESS CONTROL SYSTEMS AUTOMATION** but constantly striving for innovation over almost a decade, has meant branching out in order to fulfil the multitude of requirements faced by a diverse, and always changing global manufacturing industry.

SYSTEM ENGINEERING

Hybrid Control Corporation seeks to address complex and interdependence of systems across industrial plants that have challenged traditional Systems Engineering and Integration approaches and have proven to be even bigger challenge for end user.

Moreover our approach to system engineering affirms our commitment for company to continuously adapt to changing technical, production, and operating environments, balancing multiple requirements, design considerations, schedule, and budget constraints.

Hybrid Control meets modern demand for increased interdependence head on, by focusing on understanding customer and adopting clear processes in. - **design, manufacture, install, operate, maintain and continuous improvements and training.**

Our project management skills and experience ensure that every project is done on time and to customer expectations. Hybrid Control engineers will identify the scope of work, develop the milestones and deliver success.

With several projects to our credit, Hybrid Control continues to drive best practice and long term total solutions with evident business benefits across board. We are your best answer to turnkey solutions.

We operate in the Complete cycle of Systems Engineering including:

- Conceptual Design/Feasibility Study
- Detailed Engineering & Design
- Project Engineering/Management
- Design Integration & Configuration
- FAT/SAT
- Commissioning & Start-Up
- As Built Documentation and upgrades

PROCUREMENT

Hybrid Control possesses immense experience in procurement, planning, scheduling, cost control, quality assurance, field inspections and expediting services. Our strong sourcing skills enhance the analysis, selection, negotiation and evaluation of suppliers.

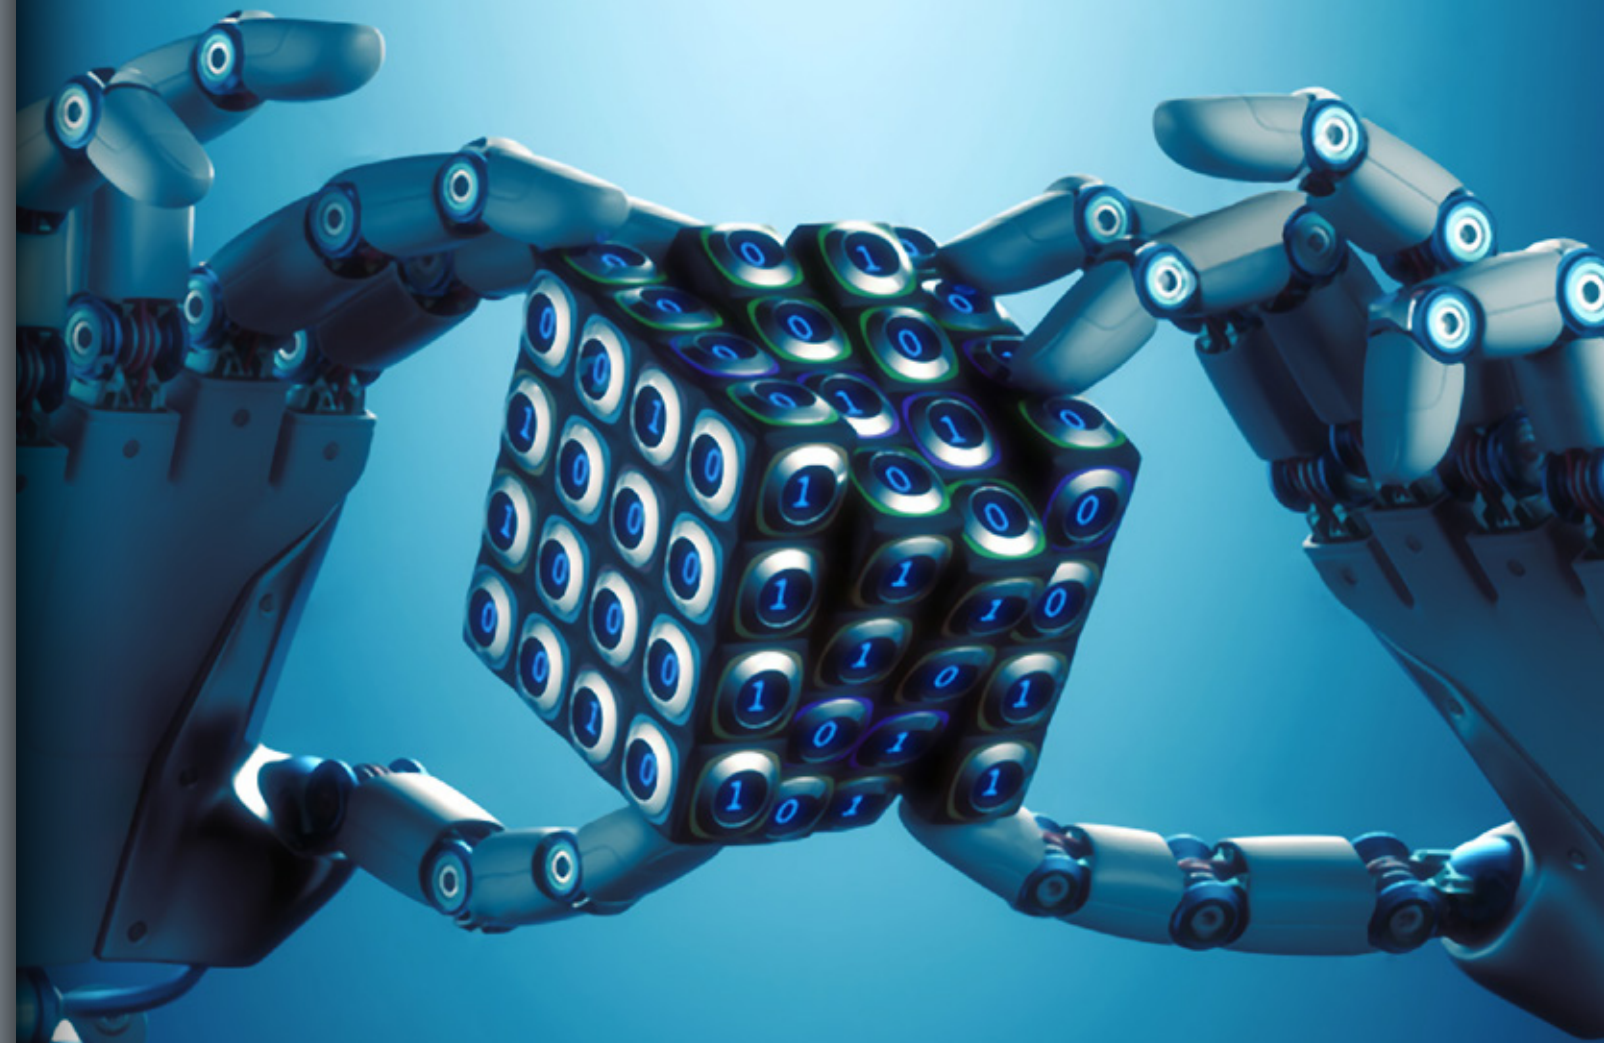

Communication between all parties is our utmost priority, ensuring speed, safety and reliability on all our contracts, regardless of the size or value of project.

All procurement items and orders are handled with assistance from our specialist engineers in various fields.

Products we supply include:

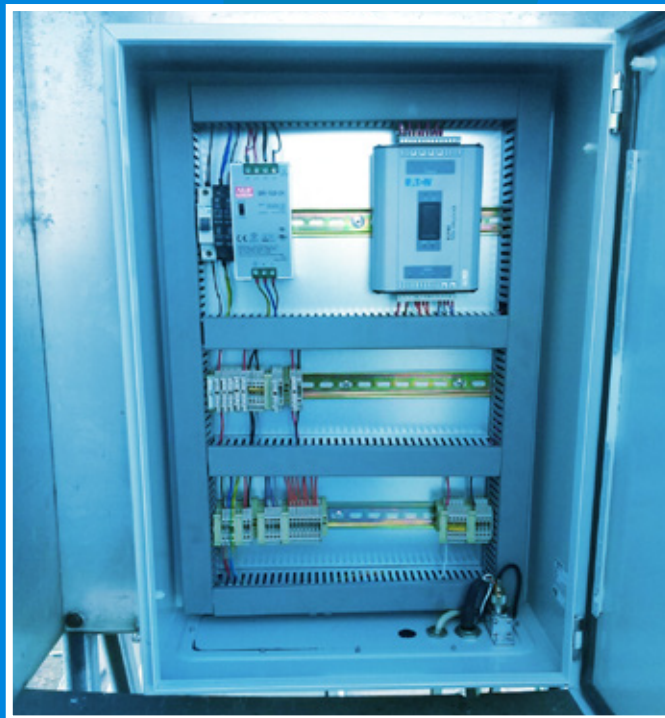

- Industrial Valves : Safety/Relief Valves, Ball Valves, Gate Valves, Globe Valves, Butterfly Valves, Plug Valves, Needle Valves, Actuated Control Valves, Solenoid Valves
- Motorised Valves Actuator
- Instrumentation & Control Equipment - Test & Calibration Equipment, Gauges and Accessories, Transmitters (Pressure, Temperature, Diff. Pressure). Flow meters, Flow Computers, Instrumentation Cables etc.
- Electrical Equipment's – Electrical Cables, Circuit Breakers, Starters, Panel Boards, Transformers, Contactors, Generating Sets, Relays, Switches, Conduit Fittings etc.
- Motor Control Centres – Usind Direct On Line (DOL), Star Delta
- Automation & Software: PLC, Variable Speed Drives, Controllers, Recorders, SCADA Systems, Software Licenses, Process Control Systems, etc.
- Maintenance, Repair & Operation Tools

PRODUCTS & SOLUTIONS

Telemetry - Remote Terminal Units

A remote terminal unit (RTU) - electronic equipment that interfaces field device to a distributed control system or SCADA (supervisory control and data acquisition) system by transmitting telemetry data to a master system.

Applications

- Water and wastewater: flows, levels, pumps
- Renewables – solar farms, wind turbines, hydro
- Irrigation: slew gate controls, levels
- Oil & Gas networks: gas well production, lift pump
- Environmental: storm warning, smoke stacks, filters
- Mining infrastructure: conveyor, re-claimer, pumps

Panel Manufacturing

Instrumentation

Process Automation Controllers

PACs offering a single platform that operates in multiple domains such as motion or servo applications, discrete, and process control. Moreover, the modular design of a PAC simplifies system expansion and makes adding and removing sensors and other devices easy, often eliminating the need to disconnect wiring. PACs modular design makes it easy to add and effectively monitor and control thousands of I/O points.

PACs offer tag-based programming as well as single tag-name database can be used for development, with one software package capable of programming multiple models. Tags, or descriptive names, can be assigned to functions before tying to specific I/O or memory addresses. This makes PAC programming highly flexible, with easy scalability to larger systems.

Motor Protection Device

Electronic Overload Relays offer a flexible design, simplified wiring, and seamless Logix integration. Real-time diagnostics are transformed into actionable information which maximizes your up-time and protects your assets.

- Includes intelligent motor control (EtherNet/IP and DeviceNet enabled)
- Offers a scalable solution
- Provides diagnostic information
- Includes integrated I/O
- Provides adjustable trip class 5...30
- Offers wide current range
- Includes Test/Reset button
- Offers programmable trip and warning settings
- Includes true RMS current/voltage sensing (50/60 Hz)
- Provides protection for single- and three-phase motors
- Offers the ability to customize the E300™ Overload Relay by selecting one each of the following modules:
 - 193-ECM E300 Communication Module
 - 193-EIO E300 Control Module
 - 193-ESM or 592-ESM E300 Sensing Module

Variable Speed Drives and SoftStart

We offer a wide selection of AC and DC variable frequency drives and Kinetix® servo drives that are all designed for flexibility, productivity, and ease of use. Our VFDs handle both low voltage and medium voltage applications, with a wide range of power ratings.

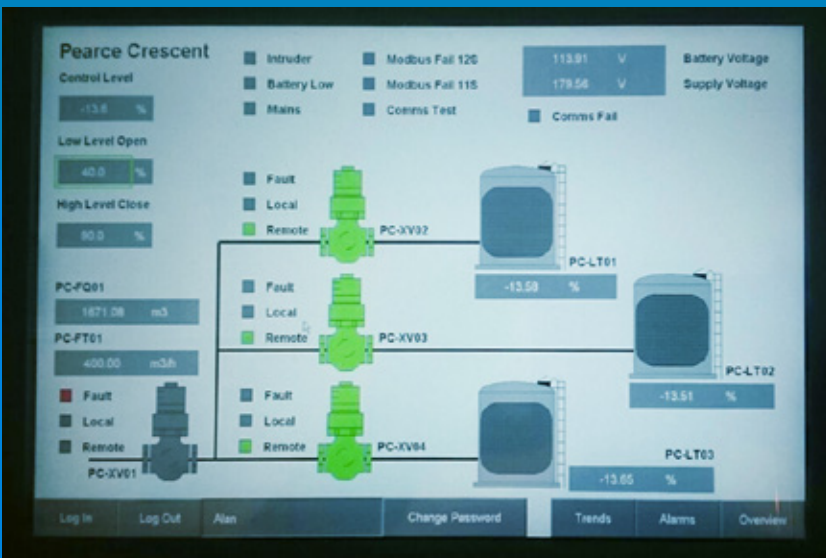

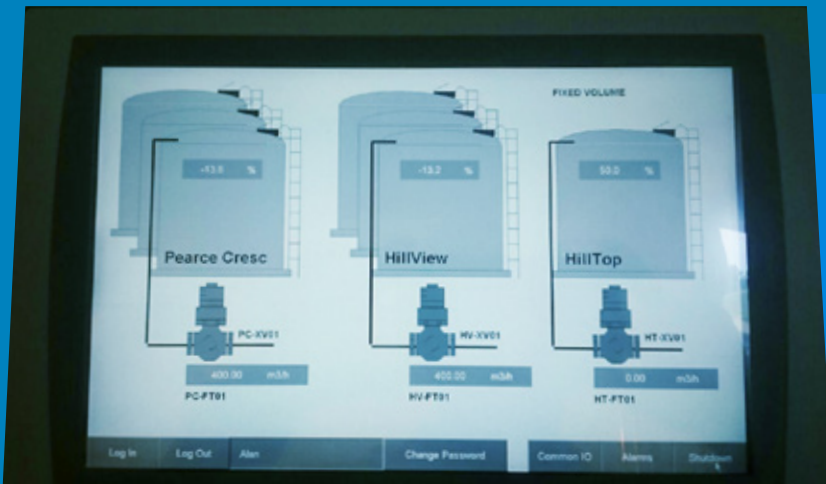

With a consistent programming structure and common operator interface, PowerFlex drives ease programming and configuration, and they reduce set-up time, training, and operation. PowerFlex Compact-class AC drives deliver a cost-effective, general-purpose solution for standalone machine level control applications and simple system integration. PowerFlex Architecture-class AC drives provide a broad set of features and application-specific parameters, and they are ideal for high-performance applications.

Electronic Operator Interfaces and Application

Graphic Terminals are available in standard and performance versions and offer display sizes from 4...19 in. with widescreen options. You can use Machine Edition software to build your application and help simplify configuration and strengthen Integrated Architecture solution.

These terminals include Ethernet connectivity and enable you to monitor applications from remote locations with VNC connectivity.

SCADA

SCADA systems used by industrial organizations and companies in the public and private sectors to control and maintain efficiency, distribute data for smarter decisions, and communicate system issues to help mitigate downtime. SCADA systems are the backbone of many modern industries, including:

- Energy
- Food and beverage
- Manufacturing
- Oil and gas
- Power
- Transportation
- Water and waste water

Virtually anywhere you look in today's world, there is some type of SCADA system running behind the scenes: maintaining the refrigeration systems at the local supermarket, ensuring production and safety at a refinery, achieving quality standards at a waste water treatment plant, or even tracking your energy use at home, to give a few examples.

Effective SCADA systems can result in significant savings of time and money.

Substation Automation

Substation automation involves automatically controlling the power system via instrumentation and control devices. Our integration involves using data from Intelligent electronic devices (IED) to provide control and automation capabilities within the substation, as well as issue commands from SCADA to control power-system devices.

Substation monitoring and control reduce the occurrence of outages and shorten the duration of outages that do occur. The IEDs, communications protocols, and communications methods, work together as a system to perform power-system automation

INSTALLATION & CONSTRUCTION

Hybrid Control is a reputable contractor for Electrical and Instrumentation. We provide E&I Installation, Testing & Commissioning in the following areas:

- Motor control centres.
- Relay logic controls.
- Programmable logic controls.
- Power, control and signal cables.
- Remote control centres push button stations.
- Small power distribution.
- Indoor and outdoor lighting.
- Grounding, earthing and lightning protection.
- Field mounted switches and sensors.
- Back-up batteries, rectifiers and uninterrupted power supplies.
- Generating sets and associated control equipment.
- PLC, DCS and SCADA system.
- Instrument panels, cabinets, console and relay racks.
- Electronics and pneumatic instruments panel and field mounted items.
- Tubing, air supplies system, impulse and signal systems.
- Process analyzers, conductivity and pH meters.
- Control valves, solenoid valves and pressure regulators.

COMMISSIONING & START-UP SUPPORT

We have extensive experience in providing commissioning support services for Telemetry, SCADA, instrumentation, electrical, power and safety systems.

Our level of repeat business is testament to the value and expertise we offer our clients, who have come to value our commitment to providing a first-class service and a long-term partnership.

OPERATIONS & MAINTENANCE

Hybrid Control provides scalable, integrated Operations & Maintenance (O&M) resources and services for your facility's lifecycle.

Service Contracts

Every plant is different and requires different customer support coverage. Therefore, service contracts are designed to be flexible to fit any customer need. The contracts include service engineers, armed with the most up-to-date technical information to assure the highest levels of system performance, as well as experienced application specialists who support optimal (system) processing and new product implementation.

Spare Part Logistics

Hybrid Control spare part coverage programs have a strong focus on directly improving availability and cost of operations. This improvement is achieved by supplying spare parts through our spare part inventory or our partner's inventory list, ensuring that parts are stored close to customer systems to minimize unexpected downtime.

INDUSTRY SEGMENTS WE ARE SPECIALISTS IN

Our automation solutions support a wide range of industrial segments, including:

- Mining
- Power generation
- Renewable Energy - Flat Panel solar
- Automotive
- Food and Beverage
- End of Line Packaging
- Chemical
- Oil and Gas
- Water and Wastewater

BEE POLICY

Statement of Intent

On behalf of Hybrid Control Corporation Group, we, the undersigned hereby pledge our support for the black economic empowerment policy, and the implementation thereof within the company, and externally in our service environment. We believe that it is an economic and social imperative to address the inequalities of the past, in order to ensure business growth and the sustainability of performance of our business.

We believe that BEE is an integral driver of economic and social transformation in South Africa and therefore an integral component of our business. We are committed to align our business in the workplace and in society, with the national transformation agenda.

We are committed to the creation and development of an enabling environment, for effective black economic empowerment within the organisation.

We reaffirm our commitment as a responsible corporate citizen, to contribute to the improvement and development of the quality of life of the community, and to support sustainable community development initiatives.

We pledge our commitment and resources, within reasonable means, to the pursuit and accomplishment of the aims and goals set out in this BEE policy document, in line with the vision, mission and strategic objectives of the Group, and in doing so, we shall ensure that Hybrid Control Corporation retains its character, business focus, values and performance standards.

Introduction

Hybrid Control Corporation is a black owned electrical control systems and power energy management services company established in 2008.

Hybrid Control Corporation's approach to BEE is based on the perspective that BEE is an economic and business imperative. Our approach seeks to engage all our stakeholders in creating an enabling environment, contributing to the development of the country and the transformation of the economy.

In executing its BEE strategy, Hybrid Control Corporation will remain focused, competitive, delivering services and results of a high standard, playing our role as a good corporate citizen, and exercising good corporate governance.

BEE strategic objectives

Hybrid Control Corporation's black economic empowerment initiative seeks to achieve the following objectives:

- To strategically position Hybrid Control Corporation as a company with the profile and capacity to provide electrical Engineering and control systems products, solution and services to the South African community
- To ensure meaningful transformation at all levels of Hybrid Control Corporation as a company
- To facilitate the active involvement of the Hybrid Control Corporation family in the transformation and development of South Africa
- To create employment opportunities for black engineering graduates and technicians
